CENTURION

THE ONE WITH THE STAINLESS STEEL HEART

DESIGNED AND BUILT TO COPE WITH AUSTRALIA'S TOUGHEST WATER CONDITIONS.

The Centurion is the result of over 50 years experience in water heater production. Its lightweight, compact design takes up less floor space and delivers more usable hot water. The Centurion comes in a range of sizes with twin element versions optional. Solar fittings are standard & allow solar panels to be added now or at a later date.*

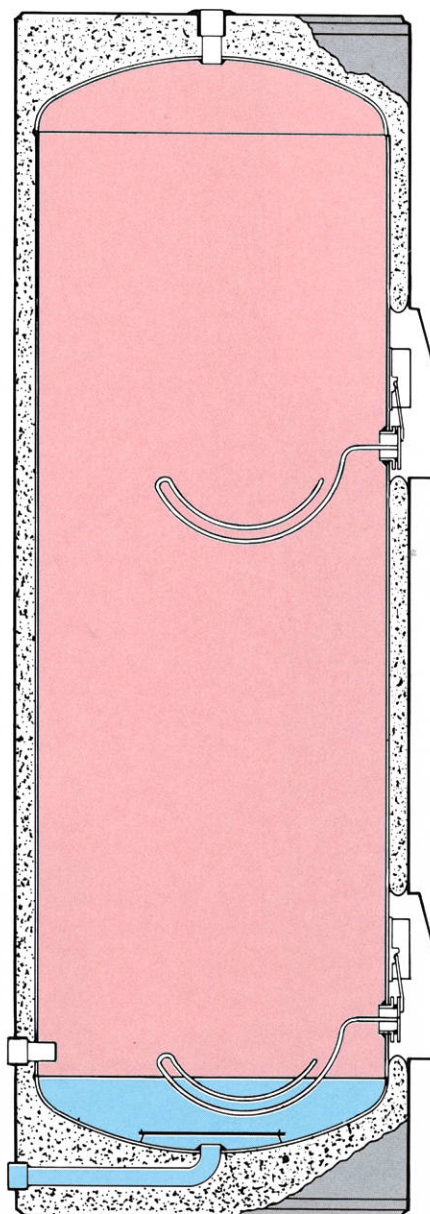

INNOVATIVE DESIGN ALLOWS EVEN HEATING.

A unique diffuser, plus innovative positioning of the inlet and outlet means incoming cold water is distributed evenly to totally eliminate stagnant water anywhere within the cylinder. The unit is self-flushing, eliminating sediment build-up. The base drain cock allows the unit to be completely flushed with all traces of sediment being drained from the lowest point in the cylinder.

LOW HEAT LOSS, HIGHER ENERGY EFFICIENCY.

The stainless steel cylinder is wrapped in 33% more insulation than other major brands to reduce heat loss. So your Centurion uses less electricity to maintain water temperature. At average electricity prices, a 250 litre model can save you substantial amounts every year.

*250L & 315L only.

PREMIUM GRADE LONG LIFE HEATING ELEMENT.

The Centurion has a specially designed element particularly suited to cope with poor quality water supplies. It not only ensures quieter operation, but works more efficiently and lasts longer.

BETTER TEMPERATURE CONTROL AND MORE USABLE HOT WATER.

A high quality thermostat lets you set the temperature to your exact liking. A lower setting improves operational efficiency while a higher setting will provide more usable hot water than other heaters of the same capacity.

IT ALL ADDS UP TO LONGER LIFE

The Centurion is designed to provide years more service. Design features such as the marine-grade 316 stainless steel cylinder, Colorbond rainproof casing and low watts density elements allow the Centurion to carry a full seven year warranty. Due to the use of stainless steel the Centurion does not require a sacrificial anode like other steel and vitreous enamel tanks. A full seven years warranty on the inner cylinder. Full details are given on the warranty certificates.
